

Requirements for Processing EMV Chip Cards

Last Modified on 01/10/2019 9:48 am EST

EMV integration is not available to Mac users or users in Canada at this time.

When you are set up for processing **Payments in Jackrabbit** and want to process EMV Chip cards, you will require the following:

1 - Windows 10 and Up

2 - TYSYS Swipe Account with C&H Financial or SafeSave Payments

If you are already using a card swiper...

- and you have a C&H Financial traditional plan, you likely already have a TYSYS swipe account.
- and you have a C&H Financial Simple Plan account, you will need to contact them to set up a TYSYS swipe account.
- and SafeSave Payments is your payment partner you will need to contact them to apply for a TYSYS swipe account. SafeSave will submit your application. **Once it is approved, it is your responsibility to contact Vantiv directly to cancel your Vantiv swipe account.**

If you are not already using a card swiper you will need to contact your payment partner to get the TYSYS swipe account opened. Their contact can be found in your Jackrabbit database from the *Tools* menu > *Credit Cards/Bank Account*

Settings.

3 - Ingenico iPP320 Card Terminal

This terminal must be purchased through your payment partner (gateway provider). You can find their contact information in your Jackrabbit database from the *Tools* menu > *Credit Cards/Bank Account Settings*.
