Sort Rows in Your Class Listings Tables

Watch a (2:32) video tutorial on how to**Sort Class Listings Tables**

Once you have your table**filtered** as needed, and columns**hidden** as needed, you should specify the SORT ORDER of the classes going down. If no sort order is given, the table will sort by Class Name, ABC order. Tables can be sorted by a single or multiple targets.

To specify the sort order, use the parameter**&sort=x** where *x* is one of the targets listed below. For example, &sort=StartTime.

Available Targets for Sorting		
Class (will sort by class Name in abc order)	StartDate (1-word, no space)	Cat2
Days	EndDate (1-word, no space)	Cat3
StartTime (1-word, no space)	Session	Instructors
Ages	Tuition	Duration
Gender	Location	Room
Openings	Cat1	

Single Sort

Example - Sort the entire table solely on Ages (Minimum Age): &sort=x

> OrgID=507172&sort=Ages

Single Sort Table by Age

Register	Class	Description	Days	Times	Gender	Ages	Openings	Class Starts	Class Ends	Session	Tuition

QUICK tip! When you use a sort code, it is automatically sorted in ascending order (smallest to largest, A to Z). To sort descending, add " desc" after the sort code. Example: to sort the table based on the number of class openings from highest to the lowest, you would use the code "&sort=Openings desc".
