

# Restore a Lead File Family to your Main Database

Last Modified on 04/11/2019 7:44 pm EDT

[Watch a \(1:06\) video tutorial on Contacting Leads and Restoring a Family](#)

Use the **Restore Family** button in a family's Lead File record to move them from the Lead File back to your main Jackrabbit database.

*Families must be restored to your main database individually. There is no option to mass restore Lead Files back to the main Jackrabbit database.*

If the family to be restored had more than one student when they were archived from your main database, there will be multiple Lead File records for the family. Use the **Restore Family** button in any of the family's records to restore ALL students in the family back to one Family record in your main database.
