

Delete a Class

Last Modified on 12/29/2020 10:00 am EST

Deleting a class completely deletes it from your organization's database, and it cannot be retrieved. Use caution when deleting classes. Jackrabbit recommends that you [archive classes](#) instead.

To permanently delete a class:

1. Make sure that the class has no enrolled students. If students are enrolled in the class to be deleted, they must be dropped first (use the [Drop link](#) or [Mass Drop](#)).
2. Click the **Delete** button in the *Class* to delete the class permanently.
3. In the pop-up box, you'll be offered the option to archive the Class. Unless the class was created in error, you should click the **Archive Class** button and follow the archiving steps.
4. If the class was created in error and needs to be permanently deleted, click the **Delete Class** button.
5. In the pop-up warning window, *This will delete the class. Are you sure?*, click **OK**.
