

We have multiple Locations (LOC codes) - can I force the Web Registration Form to only show classes for a particular Location? And default the Family Loc to that Loc value?

Last Modified on 02/15/2019 5:45 pm EST

You can accomplish this by modifying the HTML code (link) you are using on your webpage to open the form, for example with a "Click Here to Register" link.

The basic HTML code starts here:

- <https://app3.jackrabbitclass.com/regv2.asp?id=XXXXXX>

Where xxxxx is your Organization ID.

To force the form to open for a specific Location you will add **&Loc=locationcode** to that HTML.

Example

If your Org ID is 522358 and you have a Location named Jackrabbit Education with a Location Code of **EDU**, you would add **&Loc=EDU** immediately after the last digit of the Org ID.

Manage Locations									
All data within your database is assigned a Location (Families/Accounts, Students, Classes, Events, etc.) A minimum of one location is required.									
Add Location									
View 1 - 1 of 1									
Print Refresh Show/Hide Columns									
Edit	Code ¹	Name	Phone	Fax	City	State/Prov	Contact	Contact Phone	Website
	EDU	Jackrabbit Education	(704) 895-4034		Huntersville	NC			www.jackrabbitclass.com

The link code would be:

- <https://app3.jackrabbitclass.com/regv2.asp?id=522358&loc=edu>

This will auto-assign the registering family to the Jackrabbit Education Location as well as only show classes in that Location to choose from.
