My border looks different than the examples shown in this guide (or, I want to make it look different). How do I edit the table border style?

Our tables normally display without borders. (our older codes display with a double border)   If yours look different, it is because somewhere in your web editor CSS you have border rules that are overriding our defaults. These are normally found in your CSS table style rules. Contact a webmaster for assistance with your CSS. Jackrabbit can not assist with your web editor CSS style rules.
