

I need to send an email to a group of people who don't match any of the search criteria in Families > Email Families. Is there a way to send a mass email to email addresses that have no 'group'?

Run *Families > Email Families* with as few search criteria selected as needed to produce a list of email addresses that encompasses everyone you need to email. In the *Email Preview*, uncheck the *Check All* box to uncheck every email address. Check only the email addresses you want to send to and click **Send Email**.
