

Requested Class Report

Last Modified on 12/20/2018 9:40 am EST

This new report can be found by going to *Reports > Find Reports > Classes/Enrollment > All or Reports > All Reports*.

If you have your [Online Web Registration](#) and Portal Enrollment setup so that parents can simply request the class they would like their student to be in, you now have a report that helps you manage these requests. Through this report, you can see the requests that are pending and either schedule the student in to the class chosen or deny the class the parent chose for the student. Until an action is taken, the request will have a status as 'pending'.

The Message column in the report will tell you what class was requested and any comments the parent may have added.

This is a great way to keep parents from enrolling their student in classes that are not a good fit for them!
