

How is a family's Location value determined?

Last Modified on 09/05/2019 11:13 am EDT

A family's Location is determined during registration and is stored on the *Summary* tab of their *Family* record.

- For registrations done from within Jackrabbit, the Location for the family is selected by the User during *Quick Registration* or *Add Family* (*Families* menu).
 - For registrations done through Online Registration, the Location for the family is determined by one of the following:
 - A. the first class selected during registration
 - B. the first alphabetical Location listed in your database when there are no classes selected
-
